

FABIO FARÈ

FLAVIO FARÈ

Veloce HD

The Veloce HD is a single stage trigger designed to be simple, safe and robust. Its mechanism produces an extremely short trigger stroke, a wide range of adjustment and a creep-free operation.

It does not contain ball bearings which make it ideal for hunting and PRS and thanks to its light weight, it can also be used by precision shooters.

Trigger shoe is adjustable to 3 positions. 4 different trigger shoes are available.

BR 2.1

The BR 2.1 is the original trigger with micro ball bearings specifically designed to be used in free recoil shooting.

It is a single stage trigger, and thanks to the use of 6 micro ball bearings, it can achieve an extremely low pull weight and creep-free operation.

Pull weight is adjustable from 20g (0.72 oz) to 60g (2.1 oz) without the need to replace any springs.

Thanks to its characteristics, it is becoming one of the most used triggers in Benchrest and F-Class, both centerfire and rimfire.

All products are designed and manufactured in our workshop, by shooting enthusiasts.

Each component is first machined with the latest generation, high precision CNC machines, then finished by hand to ensure precision and smooth operation without compromise.

Designed with expert and professional shooters in mind because of the intricate characteristics specific for competitive use. These triggers are not recommended for amateur shooters.
